

Jaden Rucerito

Software Engineer

Age 21

j.rucerito@gmail.com

(561) 552-3166

Boca Raton, FL

Programming has been a major interest of mine since I was 12, leading me to spend countless hours learning about software, technology, and building projects on my own. I enjoy understanding how systems work, building things from the ground up, and solving technical problems. I look forward to contributing to a team and am willing to put in the time to learn and adapt.

Education

Diploma in Information Technology

2021 - 2024

Singapore Polytechnic

In my time studying, I was introduced to industry standards and technologies. I gained experience in frontend / backend web development, SQL database design / management and data analysis using python. I also had the opportunity to work with my peers on projects for real world clients, which has helped strengthen my technical and professional skills.

Work Experience

Software Developer

2023 - 2024

Innosys Pte Ltd

At Innosys, I contributed to migrating their legacy applications to high performance web and mobile platforms, developed a reusable base library for my colleagues to build upon, introduced improvements to their coding practices to improve performance, as well as writing documentation to ensure smooth knowledge transfer so as to ensure long term project continuity. This experience has taught me what it's like to develop software within a commercial environment, including maintaining legacy software, collaborating with teams across countries, adapting to growing project requirements, and designing solutions with long term maintainability and future development in mind.

Skills

Full-stack Development

Programming

- Javascript / Typescript
- Python
- Java / Kotlin
- SQL

Frameworks

- React
- Nodejs
- Jupyter Notebook
- Flask

Technical

- Local / Cloud DB
- Version control
- Linux
- Security / Cryptography
- Mobile development

Projects

Digital Repository System

Accenture Pte Ltd

I worked in a team to develop an internal web application that automated the processing of GeBIZ tender data. The existing workflow relied on employees manually inputing data and using Excel for statistics, making it difficult to maintain and analyze as the number of records grew. Therefore we designed the system to enable uploading and parsing of their existing Excel files as well as allow them to manually enter tender information to be stored in a database. With this we could easily query data to provide interactive analytics dashboards and charts to identify competitor activity, market trends and potential growth sectors. We worked closely with Accenture to gather requirements and develop features aligned with their business objectives.

Skills & Technologies

- React for frontend development, state management
- REST API development for data processing, database integration
- MySQL database schema design & management
- Data analysis, interactive dashboard development
- Application security, parameterized SQL queries, JWT authentication
- Git and GitHub for version control, collaborative development
- Scrum / Agile collaboration, Notion, project planning, task management
- Communication, requirements gathering, iterative feature development

VR Training Kit

Ministry Of Clean

I lead a team to develop a VR-based training platform that teaches workplace cleaning and safety procedures, coupled with a web interface to allow supervisors to monitor trainee progress. This solution enables employees to learn and practice procedures before performing them in real world environments and reducing the need for resources like trainers and consumable cleaning materials. We worked with Ministry Of Clean through regular meetings, product demonstrations and user testing sessions to gather feedback and improve the system. I also produced comprehensive project documentation including user manuals, technical documentation and developer guides to support future maintenance and continued development.

Skills & Technologies

- Team leadership, project planning, collaboration
- Unity game development with C#, VR integration, physics interactions
- Next.js for full-stack web application development
- PlanetScale cloud database hosting
- GitHub Desktop for version control management
- GitHub Projects for task planning and issue tracking
- Stakeholder communication, user acceptance testing
- Technical writing, knowledge transfer, documentation
